INFINITY
ERP software

Microtech Infinity™ ERP is a total integrated software solution designed to handle Enterprise-wide Resource Planning (ERP). It lets companies exchange key data among management, HR, finance, and operational departments, and with both suppliers and customers.

Microtech Infinity ERP is a fine expression of the inseparability of business and information technology. It helps the enterprise link its resources, utilize and allocate them in the best possible manner and control them on a real time basis. The system provides access to real-time information, will integrate with existing electronic commerce systems, will link to both suppliers and customers, and will provide and integrate decision support.

Microtech Infinity ERP is adaptable enterprise software that integrates the right mix of features and functions for your business and industry. You benefit with knowledgeable implementation support from our full-service consulting services. You receive superior integration to legacy or specialized point solutions, along with the ability to collaborate with your partners, and customers.

Microtech Infinity is adaptable to your business requirements. Information technologies automate the processes that comprise the backbone of your business. It is therefore imperative that these technologies should align with your strategic goals and adapt to your future requirements.

Microtech
Infinity

Microtech Infinity™ ERP exploits the power of multi-tier Client Server Architecture, which adds a middle stratum, embodying application logic and the business rules that are not part of the application, enforcing appropriate validation checks and releasing processing and reporting time from the clients. As well, it handles separate processors for reporting and job queuing. The client server technology enables it to run across various database back ends.

Microtech Infinity™ ERP assumes the possibility of companies having multiple locations of operation and control. Hence, the online data transfer has to be done across locations.

To facilitate these transactions, the other important enabling technologies for Microtech Infinity™ ERP are Workflow, Workgroup, GroupWare, Electronic Data Interchange (EDI), XML, Brokerage, Internet, Intranet, Data Warehousing, and OLAP.

Microtech Infinity™ ERP is web enabled through the Microtech Infinity.com™ business platform.

Investment Protection

Microtech Infinity™ ERP is designed to inter-connect with other software. Special APIs are used to intelligently populate its database or extract data in a user defined format. By design, you should not outgrow the system soon. As Microtech is constantly developing, even when your underlying platforms change, a natural upgrade path will be available to accommodate latest technologies. This ensures your investment is protected for many years to come.

Business Growth

Microtech team of consultants are constantly working closely with our development teams to add or change functionality, and manage changes in accordance with feedback from our clients, as well as general changes to industry requirements, and business process development to match ever-changing technologies. Continuous updating not only gives you the competitive edge of fully harnessing computing power to serve your business, but also ensures best practice and updated re-engineering for maximum profitability.

Flexibility

Flexible enough to respond to the changing needs of an enterprise. You need to adapt to a dynamic market. Microtech Infinity™ ERP frees you to focus on your business. It will adapt to your business, according to your business rules.

Modular & Open

It is built using the open system architecture. This means that any module can be interfaced or detached whenever required without affecting the other modules. It supports connectivity to third party add-ons through the connectivity API layer as well.

Comprehensive

It was designed to be able to support variety of organizational functions and is suitable for a wide range of business organizations, operating in global multi-cultural environments.

Accessibility

Microtech Infinity.com™ provides the easy access to the system whether by internal employees or by people outside the organization, such as potential customers, existing customers and business partners. The system provides a ready web interface to the order entry, order status tracking, customer/market data, payments, and inventory information. Additional modules are added according to business requirements.

Get information quickly and easily

Microtech Infinity™ ERP makes financial reporting easy with drill-down capabilities all the way down to the details. Microtech Infinity™ ERP quickly gives you the critical information you need to make important decisions. Microtech Infinity™ ERP Financial & Business Analytics helps organizations: D Utilize consistent data throughout the enterprise

Accommodate Multiple Cultures

For those companies who operate globally, operations and data entry in multiple languages will become inevitable. Microtech Infinity™ ERP has addressed those requirements elegantly, and will operate simultaneously on the same database in multiple language interfaces, as well as produce reports in multiple languages. Uni-Code design supports Katakana languages as well (Chinese, Japanese, etc.).

Improve business analysis

For the big picture view of changing business and market conditions, Microtech Infinity™ ERP provides an array of highly graphical business intelligence tools. These tools draw on real-time information collected from your enterprise systems, from partner systems and from other sources, integrating it to help you spot trends and identify issues and opportunities. At every stage you can drill down from the high-level measurements to get the detailed information. Whether the information is inside or outside your organization, our powerful business intelligence tools can help you understand it, analyze it, and make it work for you.

1. Handle multi-site, multicurrency, multi-company manufacturing
2. Improve business analysis
3. Make better decisions through faster access to real time information
4. Save money and resources by eliminating IT involvement
5. Expand distribution of data throughout your enterprise
6. Improve cost control and tracking
7. Get vital information using powerful drill-down capabilities

Our Business Consulting and Client Service teams are here to help you:

- Get your staff operating quickly using in-depth, job-specific training
- Implement the solution effectively with minimal cost.
- Maintain and grow the value of your technology asset

Microtech is your partner who has the integrated software and services you need and will stick with you to ensure that your technology investment is an asset that grows in value over time. Microtech will work with you for mutual success over the long term.

Reengineering can be called an essential precursor to ERP implementation. Since ERP gets the best out of the available resources, it is very important to reengineer the business processes before going for an ERP implementation. If the business processes are not streamlined, the resource allocation will always be sub-optimal. Reengineering also makes it smooth to drive the ERP implementation program, because the former builds the spirit of competitiveness and adaptation of best practices.

Through Microtech's strong commitment to supporting continuing education, our staff has acquired valuable expertise in the design and coordination of business processes, data models, controlling and running our applications for maximum business growth. They are also equipped with years of experience in implementing best practices for different industries.

Training and support

Microtech Certified Business Analysts, who are involved in training, implementation of services and ongoing customer support, have a superb reputation for being both responsive and effective. Through a team approach, Microtech is dedicated and focused on ensuring clients take full advantage of our products. Our approach also ensures that we build for our customer his own first line support team, to ensure non stop smooth operations.

Consulting

Microtech offers consulting services through a group of affiliated consultants; experts in management, finance, operations research, marketing, merchandising, retail, project management, and cost accounting have participated with Microtech's on board team in making our customers attain their goals through meeting project schedules and successfully realizing the anticipated return on investment.

Microtech Implementation Methodology:

The implementation concept plan or the blueprint manual is developed by one of Microtech Infinity™ ERP Certified Business Consultants with the assistance of your management and operations team. It shows the details of implementation preparation and execution steps. It is developed considering your business priorities and constraints and is used for developing a realistic implementation budget, implementation schedule, and issue resolution plan. It will be also useful for interviewing and selecting your key users, or the software operation champions.

Proven benefits from MIM are:

1. Overcoming implementation obstacles: Our tested methodology identifies and removes primary obstacles to success, including lack of internal staff skills or training, operations objectivity, intracompany differences, and systemic process problems.
2. Completing the project on time: Leads to an on-time implementation and early recognition of expected benefits-unlike most implementations that are considerably behind original schedules and goals.
3. Getting your software up and running sooner: The sooner it is up, the sooner you start seeing a return on your investment. Microtech methodology makes the implementation much quicker.
